

Garry Stevens

South Jakarta, Indonesia | stevens.garrys@gmail.com | LinkedIn

Personal Details:

Indonesian

Professional Summary

Backend Engineer with hands-on experience building and maintaining enterprise-grade Java applications. Experienced in designing RESTful services, working with relational databases, and improving system reliability in production environments. Strong focus on data integrity, performance optimization, and writing maintainable, testable code. Comfortable working in distributed teams and owning features end-to-end.

Professional Experience

Software Engineer, Unit4, United Kingdom, Remote

May 2023 — Present

- Identified and remediated a critical security vulnerability where user passwords were stored in plaintext, implementing secure encryption and safe handling across API and database layers.
- Refactored authentication-related components to align with secure coding standards, strengthening overall system security posture.
- Developed and maintained enterprise REST APIs in Java for ERP modules, delivering backend enhancements end-to-end while ensuring backward compatibility.
- Investigated and resolved production incidents across business-critical systems, performing root-cause analysis to prevent recurrence.
- Investigated and optimized SQL queries to improve performance of data-intensive workflows.
- Improved code maintainability and reliability by addressing SonarQube findings and strengthening unit test coverage (JUnit, Mockito).
- Contributed to CI/CD workflows using Jenkins and Azure DevOps; applications deployed on WildFly.

Software Engineer, Samsung Research Indonesia, Jakarta, Hybrid

Feb 2022 — Apr 2023

- Designed and developed an internal web platform to support AI training workflows, building ~10 RESTful API endpoints from scratch using Java (MVC pattern) and structured DTO layers.
- Modeled database interactions and implemented backend logic to support seamless collaboration with frontend engineers.
- Implemented and fine-tuned Elasticsearch indexing and relevance scoring to improve search accuracy and data retrieval performance.
- Containerized services using Docker to ensure consistent development environments.
- Improved code maintainability by addressing static analysis findings (cognitive complexity and code smells).
- Worked in an Agile environment using Jira and Kanban for iterative delivery.

Academy Instructor, Course-Net Indonesia, Jakarta, Hybrid

Feb 2019 — Jan 2022

- Delivered Java programming training to 500+ students as part of Indonesia's national upskilling program.
- Designed structured curriculum and hands-on projects to improve job readiness.

Areas of Expertise

Enterprise Backend Development

REST API Design & System Integration

Application Security & Secure Coding

Legacy System Modernization

SQL Query Optimization

Elasticsearch Indexing & Relevance Tuning

Code Quality & Static Analysis
Feature Prioritization & Technical Feasibility Assessment

Technical Proficiencies

Languages: Java, SQL; **Frameworks & Architecture:** RESTful APIs, MVC Pattern, Java EE, Spring; **Databases & Search:** MySQL, PostgreSQL, Elasticsearch; **Testing & Code Quality:** JUnit, Mockito, SonarQube; **Tools & DevOps:** Git, Maven, Docker, Jenkins, Azure DevOps, WildFly

Education

Bachelor of Computer Science, Jakarta
Binus University, Oct 2018 — Jul 2022

Languages

English, Indonesian
